💼 Work

May 2016 – Sep 2016

IT Systems Assistant • Ministry of Natural Resources and Forestry

Part of a team of project managers and business analysts developing a replacement for an end of life legacy system.

- Developed a macro to pre-process and error check source data files into a standardised file format for use by a corporate system.
- Updated user documentation including documenting newly developed processes.
- Maintained the project data model ensuring parity between the model and the physical database. Included updating model with any changes resulting from development.
- Created test case naming convention as well as develop all possible system test cases.
- Participated in team/client meetings for requirement gathering and solution development.
- Carried out testing of application and processes.

Jan 2016 – Feb 2016

Web Developer (shedman.ca) • Shedman Inc.

Tasked with upgrading an aging website to be more mobile friendly as well as add new features to improve the user experience.

- Developed a responsive site using PHP to attract mobile users and improve SEO results.
- Simplified navigation to enhance user experience for non tech savvy users.
- Created a gallery, using PHP and MySQL, with filters to be able to sort and display images based on those criteria.
- Created an admin page so that the company could upload pictures and select the tags for those pictures.

Jan 2012 – Jan 2015

Team Lead - Installations • Shedman Inc.

My role was to lead an installation team to deliver, build and install a variety of customs sheds and garages as well as interact with customer to ensure satisfaction with the product and services received.

- Provided excellent service to customers by effective communication and by directing the installation team
- Handled re-stocking products with heavy machinery
- Communicated consistently and proactively with installation team to meet tight deadlines
